Engineering Handbook

How the Filex team builds and ships software

Filex Demo Workspace

Internal document · July 2026

- Working agreements
- Code review
- Releases
- On-call

Working agreements

We ship small changes behind feature flags, review every pull request within one working day and keep the main branch releasable at all times. Incidents are blameless and every one of them ends with a written report.

Code review

Reviews focus on correctness, clarity and test coverage, in that order. Style is enforced by tooling so that humans do not spend review time on formatting. A reviewer who requests changes owns the follow-up conversation.

Releases

Releases are cut every two weeks from main. Release notes are written by the engineers who shipped the work and are published to the Documents folder together with the migration checklist.

On-call

The on-call rotation is weekly. The primary responder acknowledges pages within fifteen minutes and escalates after thirty. Every page must map to a runbook, and every runbook lives in the Shared folder.
